EDUCATION

York University

Specialized Honours BSc, Computer Security

Exp. Apr. 2028

Toronto, ON

- Relevant coursework: Advanced Object-Oriented Programming, Discrete Mathematics, Computer Organization.

EXPERIENCE

Sandbox Simulator

Founder & Full-Stack Developer

October 2024 – Present

Toronto, ON

- Built and shipped a **sandbox world-building platform** for creating and simulating persistent worlds; grew to **9,000+ registered users** and **20,000+ weekly visitors**, monetized through a paid tier.
- Architected a stateful **FastAPI (Python)** and **PostgreSQL** backend powering the simulation engine, persistent user-generated worlds, and authenticated accounts across **concurrent sessions**.
- Hardened production infrastructure with **Cloudflare** edge caching, per-IP **rate limiting**, and **DDoS protection**; absorbed a **10x overnight traffic surge** with **zero downtime** as sole on-call engineer.

Shake Shack

Freelance Full-Stack Developer

December 2025 – February 2026

Toronto, ON

- Led requirements gathering with the head of technology for **ReceiptGuard**, a receipt validation platform; defined the architecture, threat model, and technical scope.
- Built a **React Native** iOS/Android app capturing GPS-tagged, timestamped photo evidence at each order handoff; shipped one codebase across both platforms, **halving build and QA time**.
- Designed a **Java (Spring Boot)** REST API validating submissions and writing **immutable records** to **AWS S3**, creating a tamper-evident chargeback audit trail across **tens of thousands of daily orders**; covered by **40+ JUnit tests**.

Saftech Designs

Full-Stack Developer

January 2023 – April 2024

Toronto, ON

- Audited **15+ API endpoints**; hardened authentication, added **CSP/HSTS security headers**, and enforced **rate limiting** to address major application security vulnerabilities.
- Rebuilt the platform in **Next.js**, migrating from a legacy CMS that could no longer be securely patched.
- Applied code splitting, lazy loading, and image compression to achieve a **75%+ reduction in page load time**.

PROJECTS

Zocratic MMA

UFC Fight Prediction Platform · Next.js, FastAPI, PostgreSQL, XGBoost, AWS, Python

January 2024 – Present

- Built a **Python** ETL pipeline using **BeautifulSoup** and **Pandas** to scrape and normalize statistics for **4,000+ UFC fighters** into **PostgreSQL**; engineered features including strike differentials, takedown rates, and finish tendencies.
- Trained an **XGBoost** classifier achieving **75% held-out accuracy**; deployed via **FastAPI** serving **hundreds of predictions weekly** with **automated daily retraining**, monetized through a paid subscription.

PostBridge

Social Media Scheduling Desktop App · Electron, React, TypeScript, SQLite, Playwright

June 2025 – Present

- Built **PostBridge** with **Electron + React (TypeScript)**; one codebase ships to Windows and macOS, enabling users to draft, schedule, and publish content across **4 platforms**.
- Engineered **Playwright** browser automation for platform publishing workflows; enforced platform-specific media rules and isolated per-account sessions in **SQLite** to prevent cross-account data leakage.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, JavaScript, TypeScript, Bash, HTML/CSS

Frameworks & Data: React, React Native, Next.js, Node.js, FastAPI, Spring Boot, Electron, PostgreSQL, SQLite, Supabase, XGBoost, Pandas

Infrastructure & Security: AWS (S3, Cognito), Cloudflare, Docker, Git, GitHub Actions, REST API design, authentication, rate limiting, JUnit
